

How much does a Laboratory Autoclave Cost?

If it's your job to cost out a new build Laboratory or Laboratory refurbishment or if you want to get an idea for budgetary purposes of how much it would cost to replace your existing model then this guide should set you in the right direction.

Listed below are examples of Priorclave's extensive range of Research Grade Laboratory Autoclaves designed specifically for general purpose laboratory sterilising tasks in Education, Life science, Research and within the Food and Drink industries.

Each shows a price range for the purchase, delivery, installation and routine servicing for the first two years of these models within the United Kingdom. The price range covers from the smallest, most simple model in the range up to the largest model with a more complex specification.

While many other options are available and often of course, better prices can be negotiated from suppliers, for the purposes of general costing and budgeting these prices will give a good indication of expected costs.

The prices shown are UK prices in pounds sterling.

For sales outside of the UK extra packing and shipping charges would be applied along with any onward shipping costs, local tariffs and duties applicable at the destination country, so it is always a good idea to contact your local distributor to get a better idea of actual costs where you are.

For a full and more detailed price list please [contact Priorclave](#).
