

# The smarter choice in front loading laboratory autoclaves

The QCS front loading autoclave range is designed and produced by Priorclave in its' own British manufacturing centre. It is one of the most versatile and cost efficient steriliser available with a chamber design that offers 20% more in loading capacity than sterilisers of the same capacity.

one touch controls enable users to easily step through settings of temperature and time.

advanced Tactrol® 2 microprocessor controller ensures precise control of the sterilising process, all process data is archived for future reference.

key lock prevents unauthorised access.

cylindrical stainless steel chamber is manufactured by Priorclave using bespoke-designed welding systems that reflect in some of the smoothest chamber interiors.

low loading height for easier access to sterilising chamber.

sterilising performance data is held in an archive file which can be subsequently downloaded onto USB drive for analysis by the Priorclave Technical Customer Care Team to help fine-tune autoclaves to specific applications.
